Gabriel
Ultra PLUS OFF ROAD

GAS CHARGED SHOCK ABSORBERS

QUALITY AND DURABILITY

Specifically designed for 4x4 vehicle Off Road application and built with GABRIEL technology for superior handling under tough off road conditions and, equally, to provide comfort on the highway and in city driving.

GABRIEL ULTRAPLUS shocks and coil-overs features:

- Large 40mm bore pistons to cope with hard Off Road driving
- Nitrogen gas charged for superior response and consistent control
- Four lip piston seal reduces oil by-pass for maximum shock control and performance
- Large reservoir cylinder provides better cooling for longer shock life
- High temperature hydraulic oil reduces friction and wear in extreme operating conditions
- Top dirt wiper oil seal stops dirt from entering inside the shock
- 360 degree arc welding of mounts to resist side loading – far superior to a split eyeing with side welding
- Specially formulated rubber and bonded bushes to withstand wear and tear on rough terrain
- The range includes shocks designed for fitment to vehicles with the original O.E. suspension height as well as for lift up to 50mm
- ULTRAPLUS shocks are covered by a 3 year or 60,000km warranty

ULTRAPLUS STEERING DAMPERS

Designed to reduce shimmy or the wobbling of the front wheels when on rough terrain, a Steering Damper will dampen the steering system's lateral movement and provide better feel, handling and steering control. In doing so, it will also reduce wear on the tyres and other front end parts.

- 35mm piston bore, larger than the equivalent O.E., with larger oil
- volume capacity for longer life
- 15mm piston rod, also larger and stronger than O.E.
- Rugged mounts, interchangeable with the original
- Steel shield to protect the rod from stone damage
- 50/50 damping control for all steering lateral movement
